

MILLING AND GRAIN STORAGE

- MKS Milling P: 195
- MKS Milling P: 125 Scraper
- MKS Milling P: 100 Scraper

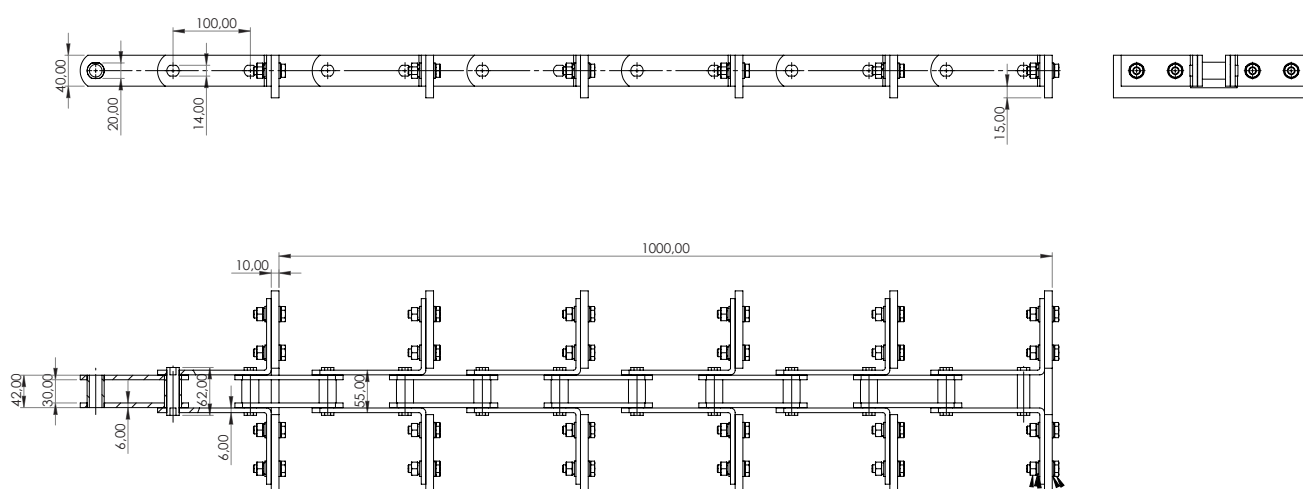

Whether it is transport or storage in grain silos, the grain industry is subject to serious environmental constraints, especially in respect of operating conditions in a dusty and abrasive environment. For this reason, as Makelsan Chain we manufacture special chains with high resistance to wear and oxidation to be used in elevator and conveyor lines. The scraper chains we produce are used as silo discharges for grain and flour or as silo carriers. Scraper attachments of such chains are usually supported by PE1000 plates. As wheat and flour are the bases of nutrition chain, we complete the chain circle of the milling industry.
